Time

ACER Role and Process

The European Network Codes aim to contribute to the objectives of the 3rd Energy Package, in particular, non-discrimination, effective competition and the efficient functioning of the market.

ACER's role as set out in Regulation (EC) No 714/2009, Art 6(7)-(9):

- Provide a reasoned opinion to ENTSO-E on the compliance of the Network Code with the Framework Guidelines.
- When the Agency is satisfied that the Network Code is in line with the Framework Guidelines, the Agency shall submit it to the Commission and may recommend that it be adopted.

Process:

- ACER collects comments from EU NRAs assessing the implications of the Network Code at a national level.

Purpose of the workshop

- Consult with stakeholders to hear their views on:
 - i) Changes to the Network Code and its supporting documents after public consultation, notably following the last ENTSO-E Users Group Meeting of 13/11/12 and the last ENTSO-E information session on 12/12/12;
 - ii) how and where the Network Code meets or deviates from the Framework Guidelines.

Thank you for your attention!
